

Make it easy  
for users to  
put your card  
*top of wallet*

### CardSwap

Help users transition to your platform and earn interchange revenue each time they purchase from Amazon, Netflix, Uber, Starbucks, and other leading brands.\*

CardSwap™ allows users to automatically apply new debit or credit card information across their favorite subscription and digital point of sale services in a single, elegant workflow.

Users enter their card info and login credentials for their subscription services, and the new preferred payment information is automatically tested and applied in real time across multiple services.

Once a user completes the process, they've put your card top of wallet for some of their most valued vendors—expanding their engagement with you and positioning you to benefit from valuable interchange revenue.

User enters card info and subscription login.

Automatic testing of user's new payment method.

Card info is distributed across selected subscription services.

Your card is now top of wallet, earning interchange revenue.

### **Supports many popular services.**

CardSwap's growing network of supported services includes Amazon, Netflix, Hulu, Spotify, Pandora, Apple Music, Uber, Verizon, Loot Crate, Starbucks, Instacart, Blue Apron, Disney+ and many more.

**Implementation is simple.** CardSwap can be implemented standalone or as a custom experience utilizing your APIs.

**Secure and compliant.** CardSwap is PCI compliant and undergoes regular maintenance and testing to ensure user data is protected.
